PROFESSIONAL SUMMARY

Lead Full Stack Engineer with 12 years building and modernizing production Angular, React and .NET platforms in regulated healthcare, education and finance. Currently leads the front-end and .NET architecture of an administration platform deployed across 18+ US school-district environments; previously owned the patient-communication domain of a clinical platform spanning 190+ hospital facilities and ~47M patient encounters.

SKILLS

Frontend: Angular (v2-19: signals, standalone components, lazy loading), RxJS, NodeJS, React 18, Redux, TypeScript, JavaScript, HTML, CSS, FlexBox, Bootstrap, Tailwind, Figma

Backend: C#, OOP, .NET 8, .NET Core, ASP.NET Web API, REST API, Microservices, Python, FastAPI

Architecture: System design, SOLID, Domain-Driven Design, CQRS, Repository/Strategy/Factory patterns, dependency injection

Data: SQL Server, Entity Framework, LINQ, query optimization

Cloud, DevOps: Azure (App Service, Functions, Service Bus, Event Grid, Key Vault, App Insights), AWS (EC2, S3, Lambda, CloudFront), Docker, Azure DevOps Pipelines, Teamcity, CI/CD, GitHub, GitHub Actions, TFS, JIRA, Confluence

Quality: Postman, Playwright, Agent Browser, TDD, NUnit/MSTest, Jasmine/Karma, AI-assisted development (Copilot, Claude Code, MCP)

Leadership: Technical leadership, code review, mentoring, stakeholder management, SDLC, Agile delivery (Scrum/Kanban)

PROFESSIONAL EXPERIENCE

Lead Full Stack Engineer

CES | Remote | Dec 2024 - Present

District Administration Platform for US K-12 school districts

Angular 19, TypeScript, Signals, RxJS, .NET 8, C#, microservices, AWS, Playwright

- Architected the Angular 19 enterprise portal and .NET Core microservice layer now serving as the primary interface for administrators across 18+ US school-district environments, leading front-end and backend architecture decisions end-to-end.
- Cut initial load time ~50% and bundle size ~20% across an 18+ district Angular platform by re-architecting a 150+ KLOC legacy front-end into a modular, signal-driven structure with route-level lazy loading.
- Cut manual QA regression time per patch 87% (4 hours → 30 minutes) across 4 flagship applications and 18+ district environments by introducing Playwright test automation, including a GitHub Action that runs only the test suite matching the affected category instead of the full regression run.
- Mentored 3 engineers on Angular architecture, TypeScript patterns, and coding standards, reducing their pull-request review comments and raising the share of their code that shipped production-ready on first review.
- Built a Playwright test-case-generation agent adopted across 4 flagship product teams, cutting the manual effort of writing new test cases from scratch.
- Evaluated Claude Code plugins during the org's AI-coding-tool adoption phase and authored the organization-wide adoption strategy, codifying conventions in `.github/copilot-instructions.md` and reusable Agent Skills (`SKILL.md`).

Senior Full Stack Engineer

Atos / Eviden | Pune, India | Aug 2021 - Dec 2024

Patient Workflow Platform for a Leading US Hospital Network

React 18, TypeScript, Redux, .NET Core, C#, microservices, SQL Server, Azure

- Owned the patient-communication and care-coordination domain end-to-end for 3 years — design, delivery, release, production support — on a clinical platform serving 190+ hospital facilities and ~47M patient encounters.
- Migrated the patient-communication module off a legacy ASP.NET stack onto .NET Core microservices, eliminating a Windows/IIS-only dependency and moving the module onto an actively supported, cross-platform framework.
- Cut UI implementation effort on new features ~40% across 3 product teams by iteratively building a shared React component library, eliminating per-feature re-implementation of spacing, typography, and color.
- Set SOLID and clean-architecture standards for the team through code review and internal tech talks.
- Ran a standing mentoring program for junior engineers and bench-assigned freshers on C#, .NET, and React fundamentals — mentees went on to clear client interview rounds and get allocated to live projects.

Full Stack Engineer

Capgemini Technology Services | Pune, India | May 2020 - Aug 2021

Leading US Wealth Management Platform

Angular, TypeScript, .NET Core, C#, REST APIs, SQL Server, Azure DevOps

- Designed and shipped .NET Core APIs for advisor-portfolio and client-account management workflows on a leading US wealth-management platform.
- Cut repeated server calls for image and asset loading by building a Web Worker-based caching layer as a proof of concept, later adopted team-wide across the advisor portal.
- Contributed reusable Angular components and state-management patterns to the organization's shared component library, extending their use beyond the immediate project team org-wide.

Full Stack Engineer

Emerson Innovation Center | Pune, India | Jan 2020 - May 2020

Industrial Control Software Platform - React UI and .NET Core API features

React, .NET Core, C#

Full Stack Engineer

Tieto (now TietoEVRY) | Pune, India | Feb 2017 - Jan 2020

Clinical Vitals Visualization Platform for Nordic hospitals

Angular, ASP.NET Web API, C#, Swagger/OpenAPI, SQL Server

- Built the Angular/ASP.NET Web API platform for clinical-vitals visualization from ground-up through production release for public hospital systems across Finland, Sweden, and Norway, under EU data-protection requirements, with Tieto as sole software provider for the engagement.
- Designed and documented a REST API (Swagger/OpenAPI) that became the shared data contract consumed by 2 other engineering teams integrating with the platform.
- Contributed to Agile-delivery adoption across an 8-engineer team — participating in Scrum ceremonies, CI/CD practices, and code-review gates — aimed at improving sprint velocity and on-time delivery.

Software Engineer

Infosys | Pune, India | Jan 2015 - Feb 2017

Enterprise .NET modules for a US Retail-Services Client

C#, .NET Framework, ASP.NET, SQL Server

- Maintained and extended enterprise .NET modules for a US retail-services client, proactively resolving issues to reduce the number of tickets that escalated to the client.

SELECTED PROJECTS

PDF ChatBot - Local-First Document Retrieval System

FastAPI, LangChain, FAISS, React 18 | github.com/Nilesh-Kolhe/PDF-ChatBot

Multi-strategy retriever (regex extraction, keyword-scored section matching, FAISS MMR with CrossEncoder reranking) built after plain vector similarity underperformed on structured documents. Non-blocking SSE streaming; runs fully local, so no document data leaves the machine.

GitHub PR Guard - Automated PR-Review Workflow

n8n, GitHub Webhooks, Slack | github.com/Nilesh-Kolhe/N8N-GitHub-PR-Guard

Webhook-triggered pipeline that emits structured JSON severity findings and flags or blocks pull requests against configurable criticality thresholds, with Slack notification. Thresholds and severity schema are explicit, so output is auditable rather than a black box.

EDUCATION, CERTIFICATIONS AND WRITING

B.E. (Bachelor of Engineering), Computer Engineering | Pune University | 2010 - 2014

Microsoft Certified: Azure Fundamentals (AZ-900)

"Angular Elements in Angular 19: Creating a Reusable Web Component" - Medium

LANGUAGES

English (C1, professional working proficiency) | Hindi (native) | Marathi (native)
